INDOOR, OUTDOOR, UNDER SHADE OR TUNNEL PLANTING

Ground preparation:

Although this first step is a recommendation only, therefore is optional, we strongly advise to apply it to ensure that the soil has a healthy bacteriological activity prior seeding or transplanting seedlings.

Bio Agent	Quantity	Area
ErgostartBio	125 Kg	Per Hectare

Following application of the **ErgostartBio**, wait 15 days prior seeding or transplanting. The above is applied with sufficient water, generally diluted 1:50 (1Kg of product to 50 liters of water). **ErgostartBio** will immediately start decomposing all inert organic matter into plant food. More important it will de-mineralize any accumulation in the rhizosphere that is and has suffocated the soil. It will start by converting all of the above into humus, thus rejuvenating tired soils and allow normal and healthy roots development.

Ergofito Universal Plus application:

After ensuring that the soil has all the required minerals, trace elements, correct Ph. and its fertilization, apply **Ergofito Universal Plus** in the following manner:

FIRST APPLICATION:

Bio Agent	When	Quantity
Ergofito Universal Plus	When Planting or Seeding	5Kg Per Hectare

SECOND APPLICATION:

Bio Agent	When	Quantity
Ergofito Universal Plus	When Plants Flower	5 Kg Per Hectare

Tel: + 27 21 447 7114 / Email: ergofito@telkomsa.net

THIRD APPLICATION:

Bio Agent	When	Quantity
Ergofito Universal Plus	When First Fruit Appears	5 Kg Per Hectare

To apply the above to either the soil or as foliar application, mix **Ergofito Universal Plus** with water at a minimum ratio of 1:200.

Ergofito Universal Plus can be distributed radically via the drip irrigation simultaneously with the regular fertilization. It can be applied via a pivot, bowser or any existing method of irrigation available.
