## ORGANIC ODOUR ELIMINATION:

**Ergofito Bioflush** is a natural bacterial product that competes aggressively for food with the bacteria's that produces smells in the process of decaying. The two major smells produced by decomposition are Ammonia ( $NH^3$ ) and Hydrogen Sulphide ( $H^2S$ ) amongst others.

In order to decompose organic inert matter with no odour emission, a dose of natural bacteria in the form of **Ergofito** must be sprayed on the inert organic matter.

## ERGOFITO BIOFLUSH MECHANISM:

Often on odour emitting inert organic matter, deep penetration into the stated matter is often difficult if not impossible. Therefore **Ergofito Bioflush** is applied on all surface of the above-described matter. If the matter is liquid as in raw sewage or blood, upon application of **Ergofito Bioflush**, the smell will abate within seconds and be eliminated in minutes. However if the said liquid is stirred, another surface application is necessary immediately to once more abate and eliminate the smell. For as long as **Ergofito Bioflush** is applied to the surface of any smell the smell will be controlled.

The above can be applied on all organic inert matter including animal remains, carcasses, sewage, blood and the likes. **Ergofito Bioflush** is a fast decomposition group of natural bacteria and it masks the smell. Total odour elimination is therefore possible with **Ergofito Bioflush**.

## MIXING AND APPLICATION:

Mixing ratio and dosage:

Product	Quantity	Water
<b>Ergofito Bioflush</b>	20 Grams	1 Liter

As soon as **Ergofito Bioflush** is mixed with water, it becomes active and is ready to use. Activated **Ergofito Bioflush** has a maximum shelf life of two days. Mix only when necessary. The bacteria will continue to remediate as long as it has organic inert matter available

Apply over the odour emanating substance until wet using a spray bottle, backpack or injectors in the case of a permanent installation.
